

## **Andrew Jamieson – Dairy Farmer, Ayrshire**

Andrew Jamieson is a dairy farmer from Girvan in Ayrshire. He currently has a herd of 360 Ayrshire dairy cows and does a small amount of contracting work in the area.

Chop quality is really important for Andrew. The Hydroloc™ feed roll drive system is specifically engineered to provide instant and on-the-move chop length adjustment to suit the user's specific requirements.

"For my dairy cows I need a short chop but for when I do work for a local beef farmer, he needs a longer chop. The Hydroloc feature is perfect to give this flexibility. "

As Andrew drives the machine himself, he's always on the look-out for things that make his work more comfortable whilst maintaining optimum efficiency. The Power Cruise™ driving system is a great example of this. By continuously adjusting the unit's forward speed to reach the highest possible work rate, it enables the machine to perform at maximum capacity.

"I can't believe how quickly the machine reacts when you hit heavy crop. The Power Cruise function makes sure that just the right power is maintained. This really helps to take the strain out of driving."

Andrew's dealer is Agricar in Dundonald. He's used New Holland equipment for years and knows the local dealer well.

"I've had great service from them. They're always there when I need them and prepared to go the extra mile. I borrowed their demonstrator on one occasion while the salesman himself came down to work on the machine one evening.

"For me, the FR9050 is the best machine on the market. It's easy to operate, there's good access and the chop quality is excellent."
